# A PRANAV KOUNDINYA

apkoundinya@gmail.com | +91 9964206143 | Bengaluru, Karnataka | Linkedin |GitHub

## EDUCATION

**M S Ramaiah Institute of Technology, Bengaluru** 2022 - 2026
Bachelor of Engineering — **Artificial Intelligence and Machine Learning - CGPA: 9.61**

## EXPERIENCE

**Associate Data Scientist - PlaySimple Games Ltd** Jun 2026 – Present

**User-Level Journey Analysis for D0 Players** | Python, SQL, Statistical Analysis, Data Visualization
- Identified D0 puzzle journeys associated with higher D1 retention by analyzing user puzzle paths and sequences and their return behavior using Markov chains, Finite State Machines and computing the transition probabilities from one puzzle state to another.
- Compared using retention rates and confidence intervals and validated across 4 acquisition channels and past 84 days of data and future cohorts.

**Creative Studios: AI Video Generation Tool** | Python, LLMs, Seedance, Video Processing, Google Drive, APIs
- Built an end-to-end AI video generation platform combining 4 playable games, AI-generated visuals, automated transitions, gameplay footage, and final video generation.
- Automated weekly creative generation for 240+ storylines across 3 regions and developed 4 reusable creative formats covering gameplay, live video, influencer-in-video, and voiceover-in-video ads.

**Recovery & Revenue Analysis Dashboard** | Python, FastAPI, React, SQL, Forecasting
- Replaced manual finance reporting with a dashboard combining Recovery, spend, ROAS predicting revenue breakdowns across past months and future cohorts for multiple categories.
- Implemented revenue forecasting and added product-level analysis for games with limited data (< 3 months)

**Trainee Data Scientist - PlaySimple Games Ltd** Dec 2025 – Jun 2026

**LTV Model for GCC (Game, CLI, Country)** | PySpark, SQL, Databricks, Machine Learning
- Improved LTV prediction for the GCC cut by adapting country-level data and GCC-specific features using PySpark and SQL
- Increased training data available for each market by restructuring data across game, CLI, and country levels, improving prediction accuracy over the existing baseline.

**Automation of Static Image Creation for Marketing** | Python, OpenCV, Pillow, NumPy, Streamlit, Databricks, AWS S3
- Automated static ad creation by generating large batches of creatives with different encrypted text, backgrounds, borders, fonts, and layouts, replacing repetitive manual design work, built Streamlit interface to track and trigger jobs, preview and download results, integrated it into team's Creative Studio.

**Content Generation for DTC Game** | Python, GPT, SentenceTransformers, Google Sheets, Web Validation
- Automated DTC game's content creation across 5 stages, from word and clue generation to source citation and fact-checking, generating 15 content items and 3 clues per item.
- Improved content quality by adding automatic validation, regeneration, and duplicate detection against 223 historical records, while ensuring at least 10 validated items per output.

**ML Engineer Intern - 4SYZ Infotech Solutions Pvt Ltd** Mar 2025 – Jun 2025

**Automated Inventory Tracking and Product Categorization |** Python, SQL, Machine Learning,Gradient Boosting
- Automated inventory-tracking by implementing a dynamic-threshold based system, reducing manual monitoring time by 10 hours per week.
- Streamlined inventory management by building an ML classification system to auto-categorize incoming stock, reducing manual data entry time while maintaining 88% accuracy.

**Computer Vision Intern - AIQuantum Smart Solutions, NITK Surathkal** Jan 2025 - Feb 2025

**Automated Road-Segmentation using U-Net |** Python, Deep Learning, PyTorch, CNNs, Image Segmentation
- Developed a U-Net CNN for automated road segmentation, evaluated model performance securing a 91.17% test accuracy.
- Standardized and cleaned the data, handled outliers, and fine-tuned hyperparameters to enhance model performance by 12%.

## PROJECTS

**Influencer Recommendation System using Multimodal Representation Learning & Graph Neural Networks**
CLIP (ViT-B/32), GraphSAGE, FAISS, Autoencoder, FastAPI, Python
- Built an influencer recommendation system covering 2,960+ YouTube and Instagram profiles, combining creator content, engagement metrics, and network relationships to recommend relevant and credible influencers.
- Used CLIP embeddings, GraphSAGE, and autoencoders to match creators with brand requirements and identify potentially inflated engagement; achieved 3.1× better ranking performance than follower-count ranking and outperformed 4 baseline methods.

## TECHNICAL SKILLS

- **Programming and Data**: Python, SQL, NumPy, Pandas, PySpark
- **Machine Learning**: Scikit-learn, Feature Engineering, Classification, Regression, Clustering, Model Evaluation
- **Deep Learning**: PyTorch, CNNs, Transformers, Graph Neural Networks
- **Generative AI**: LLMs, RAG, Prompt Engineering, Embeddings, FAISS
- **Tools and Frameworks**: Git, Databricks, Tableau

## CERTIFICATION

- Machine Learning Specialization — Stanford Online, DeepLearning.AI [ View Certificate ]
